## DAX SHOW PRICING!

### What is DTF Printing?

Direct To Film printing is a method that allows users to print their logos and/or artwork onto a special type of coated PET film. This film is then used to transfer the printed image onto textiles using a TPU powder adhesive that can be applied manually or by using an automatic powder shaker to distribute the adhesive evenly across the artwork and film, then cured and with this added step, the transfer process is made possible.

### What sets DTF apart from other transfers?

- No cutting and weeding required.
- No mask and lifting graphic from liner required.
- Crisp, defined edges and images from start to finish.
- Works on most fabrics including non-treated cotton, polyester, denim, nylon, leather & more.
- Transferred graphics have excellent wash characteristics and a very slight touch to the hand.
